Wind Energy Foundation | Wind Power Your Home Many systems sold today are off-grid, but demand is rising for on-grid systems that essentially use the grid as a battery: When the wind blows, the owner uses electricity from the turbine; when winds are low and consumption is high, the owner uses electricity from the grid. Wind power - Wikipedia A wind turbine installation consists of the necessary systems needed to capture the wind's energy, point the turbine into the wind, convert mechanical rotation into electrical power, and other systems to start, stop, and control the turbine. Hybrid Solar Wind Primus Wind Turbine Off-grid Kits A charge controller is an electronic voltage regulator used in off-grid hybrid solar wind systems with battery banks to properly control the charge from the solar panels or wind turbine keep the voltage to the battery bank within acceptable limits.
